

Campus Cham

STUDY AND RESEARCH

Campus Cham is the newest teaching campus of Deggendorf Institute of Technology.

With futuristic degree programs in mechatronics, artificial intelligence, robotics, and digital manufacturing, students are prepared for leading roles in their professional careers.

Both industry and everyday life are currently undergoing fundamental change, driven by the growing use of new technologies. Students are not only introduced to these fields in theory, but also gain hands-on technical experience through innovative and experimental project work in state-of-the-art teaching laboratories.

Research and development also play a central role at the Cham campus, particularly in the two key areas of Intelligent Production and Robotics. The technological innovations developed there, together with strong research expertise and innovative teaching, make Campus Cham a strong partner—both in the Cham region and beyond.
